# Pediatric Palliative Care in Tajikistan: ADAPT Profile

The Assessing Doctors' Attitudes on Palliative Treatment (**ADAPT**) study was conducted in 2019, in collaboration with local stakeholders. The study identified **physician** access, knowledge, and perceptions on palliative care integration **for children with cancer** as outlined by the World Health Organization (WHO) guide in 2018. The study received 424 physician responses from 11 countries. (For published references, see p.2.)

## WHO Guide for Pediatric Palliative Care

Palliative care is defined by the WHO as the prevention and relief of patient suffering and the "ethical responsibility of health systems" that "should be integrated with and complement prevention, early diagnosis and treatment."

Palliative care improves treatment outcomes such as:

Improved quality of life

For additional information:

- · Better pain control and symptom management
- · Decreased hospitalizations and fewer days in the intensive care unit

Palliative care integrated into health care systems at all levels and home care reduce health care costs by:

- Decreasing unnecessary resource utilization
- Being less expensive
- Yielding better outcomes.

Integrating Palliative Care and Symptom Relief Into Paediatrics: A WHO Guide for Health Care Planners, Implementers and Managers. World Health Organization; 2018.

# Access to Pediatric Palliative Care

**19%** physicians reported having **no access** to palliative care consultation in their practice

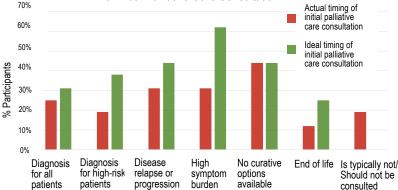

**50%** indicated that palliative care consultation is **not available** when they feel it is needed for children with cancer

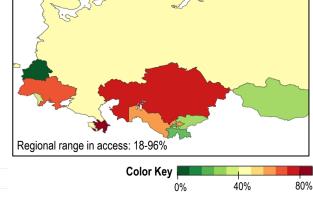

**31%** felt that palliative care was involved **too late** in the treatment of a child with cancer

#### Physician Perspectives on Actual vs. Ideal Timing of Initial Palliative Care Consultation

# Barriers to Early Palliative Care Integration

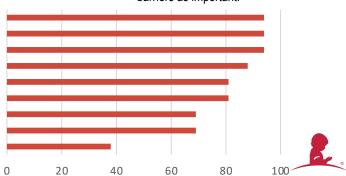

Physicians in Tajikistan indicated that limited access, lack of home-based services, family resistance, are the most significant barriers to palliative care consultation for children with cancer. Limited access Lack of home-based services Family resistance Limited knowledge Time constraints Physician discomfort Prognosis uncertainty Physician desire to maintain hope Cost

88% physicians believe palliative care reduces suffering for a child with cancer.

**38%** physicians believe palliative care should be integrated earlier in the care of children with cancer than typically occurs in their setting.

% physicians indicating the following barriers as important:

Eurasia Regional Differences by Country: % physicians reporting **no access** to palliative care consultation

#### Physician Confidence in Delivering Palliative Care

69% do not feel confident assessing and treating the physical needs of pediatric patients with serious incurable illness.

31% do not feel confident assessing and treating the emotional needs of pediatric patients with serious incurable illness and their families.

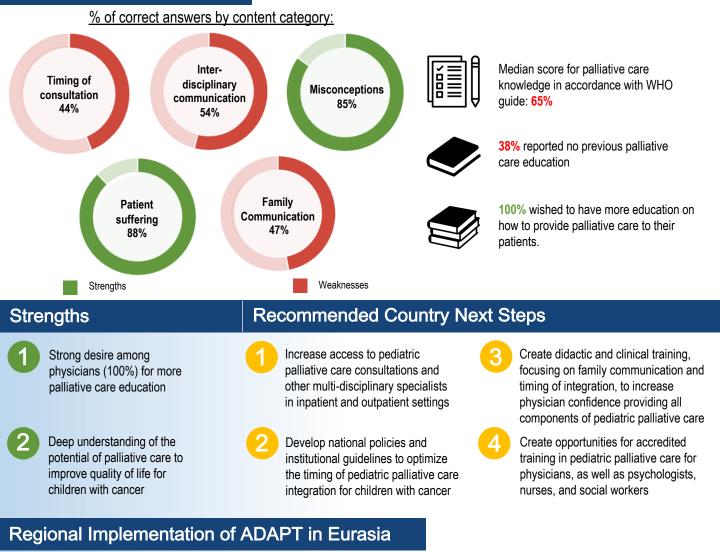

56% feel burdened by their inability to control the

suffering of children at the end-of-life.

44% do not feel confident providing grief and bereavement care to the families of children who die.

# Physician Knowledge

1) Regionally adapted pediatric palliative care curriculum based on identified knowledge gaps 2) Eurasian working group on palliative care through the Eurasian Alliance in Pediatric Oncology (EurADO)
